Hello Sam,

I have researched the issue the firm was having with tracking of all book inventory. I have included code in my personal GitHub repository on all four phases in the book monitoring system for your review:

https://github.com/luvinpython/OpenclassroomsProject

This is a great tool that can be used to show the most up to date inventory from the website:

https://books.toscrape.com/index.html

The user can run the code to show if there is an issue with the website or to show data for a particular book, a particular category or to show all categories and images for the entire website.

This Python code is very short and with just a couple lines of code and importing of modules it can rapidly pull the info needed. This can help this firm establish an ETL pipeline in the future and to keep better track of inventory.

Please let me know if you have any questions and I'll be happy to answer them for you.

Thank You

Kris
